KOSPI	1843.47	1981.99	-6.99%

May was a difficult month for both global and Indian equities. Indian equity markets fell by ~ 6% in the month. Though the Indian equity markets outperformed other markets in local currency terms, in US\$ terms it performed in-line with the EM Index due to the rupee depreciation of 6%. The RBI resorted to specific measures to stem the sharp fall in the rupee, including mandatory conversion of EEFC (Exchange Earners Foreign Currency) of US\$ holding into INR within two weeks. RBI, after permitting Qualified Foreign Investors (QFI) to invest in equity mutual funds and equities earlier, has created a separate QFI sub-limit of US\$ 1Bn for investments in corporate bonds and mutual fund debt schemes. Lingering uncertainty on GAAR was put to rest by the Finance Minister by postponing it by a year and removing the ambiguity that the onus of proof would lie with the taxation authority rather than the tax payer.

Foreign institutional investors (FIIs) were sellers of US\$ 58 Mn in May as the global risk off trade was widespread across all risk assets. Fears of a global economic slowdown pushed the risk-off trade, taking safe-haven yields to new lows (US10yr at 1.48%, JGB10yr at 0.81%). The risk off trade followed a series of weak global data releases, including a higher-than-expected US unemployment rate of 8.2%, lower-than-expected GDP growth in Brazil at 0.2%, and a sharp fall in the Chinese manufacturing PMI to 48.4. Crude oil corrected to US\$97/bbl. It is perceived that the all-round global GDP and PMI weaknesses will lead to central banks opening the liquidity taps again to allay funding/asset concerns.

On the domestic front, Q4 GDP growth at 5.3% was disappointing. Industrial growth of 3.4% in FY12 is one of the weakest in recent times. The IIP for the quarter grew by a mere 0.4% over last year, lowest in the last five quarters. The slow IIP growth was on account of weakness in Capital Goods (Investment) and Consumer Durables (Consumption). Industrial production is likely to remain weak in the near-term notwithstanding a firm manufacturing PMI reading; however the crude oil prices falling by over 20% and lower commodity prices will help in controlling our current account deficit, fiscal deficit and inflation.

Despite the poor GDP growth in Q4FY12 and weakness in industrial production, corporate earnings growth of Q4FY12 has been good. The earnings growth for Sensex companies for the quarter, at 29% Y-o-Y, was higher than the consensus estimates. The sensex earnings growth for FY12 was 13% Y-o-Y with an EPS of Rs. 1134 for the Sensex. Our FY13 Sensex EPS estimates are optimistic as we believe the earnings downgrade cycle is over. We expect earnings growth in FY13 to be in the range of 14% - 15%. Equity valuations have turned attractive at 12.25x with the sensex forward P/E. Equities looks attractively priced for long term investors and the risk reward profile is favorable as most negatives are priced in.

Debt Market Outlook

Key Indices	31-May-12	30-Apr-12	% Change
10 year G-Sec	8.50%	8.67%	-1.98%
5 Year G-Sec	8.31%	8.49%	-2.14%
91 Day T Bill	8.31%	8.37%	-0.72%
364 day T-Bill	8.19%	8.19%	0.00%
MIBOR	9.33%	9.33%	0.00%
Call Rates	8.11%	8.08%	0.37%
Inflation	NA	7.20%	NA

The sovereign debt crisis in the developed markets, and persistent inflation and a shortage of skilled workers in the emerging markets has led to weak global outlook. The euro zone debt crisis, a weaker global growth outlook and increased risk of the euro-area breakup should central banks to take a more accommodating monetary stance.

India too faces rising macro-economic imbalances - - sticky inflation and high twin deficits, rising oil prices and weak foreign demand. The resultant rupee depreciation is also a matter of concern. India GDP growth has slowed from an earlier 7.4% to 6.5%. Other economic fundamentals like investment, income growth and Industrial production also showing signs of slowing down.

WPI Inflation for April was 7.23% Y-o-Y, much ahead of the consensus estimate of 6.7% and above the earlier month's 6.89%. In addition, the February reading was revised upwards from the provisional 6.95% to 7.36%. The component-wise analysis shows that demand pressures are keeping core inflation in a downtrend while agri-inflation re-emerges as a concern area even after accounting for seasonality and base effect.

Slowing growth could push the RBI to consider a cut in the repo rate. Bond yield have softened on this expectation.

We expect RBI to cut the repo rate by 50 bps through this financial year but that will depend on both headline and core inflation. Liquidity is expected to continue to be tight and RBI will keep it negative to the extent of range of Rs. 1,00,000 Crore.

The 10 year G-sec yield is expected to move down to 8.20%. Corporate bonds should track the G-sec yield with a spread of about 90 bps. Bond investors will gain as yields soften.

Learning Curve

Understanding Yield Curve

A yield curve is a graph of bond yields against their maturities or duration.

In general, Long term interest rates are higher than short term interest rates which are justified as to compensate an investor who has locked in his money for longer period of time. This curve is referred to as 'Normal Yield Curve', the same is shown below. In simple terms this concept can be understood by viewing Banks which gives higher interest rates for the longer maturity and lower interest rates for small maturities, this is an example of normal yield curve.

The shape of a yield curve is influenced by:

- The Market Rate Expectation
- The Bond Risk Premium &
- The Convexity Bias

An upward sloping curve would reflect the markets expectation of rising interest rates of high risk premium and a downward sloping curve shows the opposite. Yield curve are built on expected future interest rates.

The yield curve is a crucial indicator that indicates the direction in which the economy is moving. When the difference between the interest rates reduces for different maturities, the yield curve 'Flattens'; this reflects the shifts in the economic outlook as well as demand and supply of the capital in the economy.

A yield curve is said to be 'Inverted' when the short term interest rates of government securities are higher than the long term interest rates. In simple terms, this can also be observed in our current banking system where short term interest rates are very high.

It has been observed that inverted yield curve is an indicator of a weaker economic outlook because the investors are not confident about long term outlook of the economy. This has a huge impact on the borrowers who have opted for floating interest rates as the interest payment to the same amount of debt increases. Inverted yield curve also have an impact on the companies as they are forced to borrow at higher short term interest rates to finance their working capital requirements. This reduces expendable income and consequently impacts savings and investments in the economy. During this phase, Money market funds and certificates of deposit may also be attractive - particularly when a one-year security pays yields higher than longer-tenor securities by the same issuer.

Banks are also affected by inverted yield curve as they are forced to borrow at higher interest rates from the people who typically invest for a short period and lend to companies or organizations for a relatively longer period. Hence their Net Interest Margins & consequently, core profitability reduces.

Hence, yield curve analysis is an important tool used by investors to adjust their portfolio allocations with changing macroeconomic conditions.

Maturity Profile

About the Fund

Objective: To provide blend of fixed return by investing in debt & money market instruments and capital appreciation by predominantly investing in equities of fundamentally strong and large blue chip companies.

Strategy: To build and actively manage a well-diversified equity portfolio of value & growth driven stocks by following a research-focused investment approach. While appreciating the high risk associated with equities, the fund would attempt to maximize the risk-return pay-off for the long-term advantage of the policyholders. The non-equity portion of the fund will be invested in high rated debt and money market instruments and fixed deposits.
