Nifty	5703.30	5258.50	8.46%
Sensex	18762.74	17429.56	7.65%
BSE 100	5701.39	5251.07	8.58%
Dow Jones	13437.13	13090.84	2.65%
Nikkei	8870.16	8839.91	0.34%
Hang Seng	20840.38	19482.57	6.97%
Nasdaq	3116.23	3066.97	1.61%
KOSPI	1996.21	1905.12	4.78%

The Indian Government, after faltering for a couple of years on economic and policy decision-making, has come out and made aggressive policy changes. These include fuel price subsidy adjustments, allowing FDI in retail and aviations, announcing a SEB restructuring plan, reducing withholding tax on FII debt investments and committing to more aggressive PSU divestment. The markets welcomed the political resolve shown by the government even though it faced political opposition from its own allies in the ruling coalition. Continuing with its reform agenda the cabinet also cleared an increase in FDI limits in Insurance from 26% to 49% and allowed a 26% FDI investment in the Pension sector, both of which would require parliament approval. The proposed National Investment Board is another key reform step and would offer a single window of clearance for large infrastructure projects. If all this is accompanied with a lower interest rate regime, it would help push new investments, both in industry and infrastructure, as project level returns would increase. We expect investment cycle to recover in the second half of FY13, largely on improvement in public capex and the stabilising of private corporate capex.

On the macro front, there are signs of improvement. The first quarter current account deficit (CAD) narrowed to 3.9% of GDP from 4.5% in Q4FY12 because of an improved trade balance and steady remittances. The government has maintained its borrowing target at Rs.2 trillion, hoping that the divestment program as well as the telecom spectrum sale goes through. An expected urea price hike could further reduce the subsidy burden and improve the fiscal. Inflation figures of August 2012, however, came as a surprise. At 7.6%, inflation was 70 bps higher than the previous reading of 6.9%. Core inflation, which had been reasonably subdued till now, rose to 5.6%. In spite of this, RBI in its policy meeting on Sep 17th 2012 decided to cut the CRR by 25 bps though it left the benchmark repo rate unchanged. This move will infuse INR.17000 crores of liquidity in the system.

Outlook for equities:

Indian equities rallied 8% in September and outperformed the developed equity markets (US, Japan, Germany and France), which were down by almost 1%-3%. FIIs continued their equity buying with \$3.8bn net purchases in September, taking the YTD net purchases to \$16.1bn. DIIs continued to be net sellers to the extent of \$7.2bn. Strong inflows become a case for a stronger currency leading to further FII flows due to positive sentiments, which builds up into positive circularity.

The BSE Sensex, which has rallied smartly in the past couple of months, currently trades at a P/E of 14.5x one year forward earnings. For long term investors valuations are still attractive. Credible policy implementation from the government could result in the rally sustaining and gaining momentum. In the short to medium term, the market would also take cues from the upcoming results season and the RBI policy scheduled in this month.

Market Outlook

Key Indices	30-Sep-12	31-Aug-12	% Change
10 year G-Sec	8.15%	8.24%	-1.09%
5 Year G-Sec	8.18%	8.23%	-0.61%
91 Day T Bill	8.08%	8.21%	-1.58%
364 day T-Bill	7.96%	8.09%	-1.61%
MIBOR	8.67%	8.66%	0.12%
Call Rates	7.98%	7.94%	0.50%
Inflation	NA	NA	NA

Outlook for Debt :

The G-Sec market has seen considerable activity in the last few weeks, with the second half calendar being announced. The government intends to borrow Rs.200,000 crores through dated government bonds in the second half, which is in line with the budgeted borrowing program. The 10 year Gsec benchmark traded in the range of 8.12% to 8.20%. Corporate bonds saw very active trading in the last fortnight, with spreads compressing to 65 bps from a peak of 100 bps. The bond yields are expected to be range bound and bond markets will eagerly wait for the October 30th RBI policy.

Learning Curve:

Understanding ULIPs

Unit-Linked Insurance Plans (ULIPs) have been one of the most significant innovations in the life insurance industry. ULIPs are the most transparent, long-term & flexible retail life insurance products available today. It provides both, insurance protection and wealth creation opportunities. ULIP premium payments are appropriated partly towards providing you life cover and partly invested in the fund option of your choice – debt or equity.

In ULIPs, the protection element and the savings element are distinguishable. It allows policyholders manage their life insurance policies depending on their changing needs and gives them the flexibility of altering premium amounts or adding top-ups. It also permits them to avail of liquidity, in case of an emergency, by allowing need-based partial withdrawals.

Of the premiums paid, the allocation charges, mortality charges and policy administration charges are deducted. The balance amount is invested in a fund of the policyholder's choice. Units are allocated towards the invested amount. Each allocated unit has a price attached to it called the NAV (Net Asset Value) which is calculated and disclosed by the insurance company on a daily basis. Fund management charges are adjusted from the fund's NAV on a daily basis. The policyholder can track the fund investments and performance.

There is a wide range of funds available under ULIPs which gives policyholders an opportunity to adequately diversify their investments. These funds have different asset allocations ranging from 100% debt to 100% equity to meet the objective and risk appetite of the policyholders. Equity funds have the potential to deliver high returns as they have higher risks as compared to fixed income funds. ULIPs allow for switching between funds and redirect future premiums as the investment objectives may change over time. Insurance companies also offer funds which guarantee the highest NAV for a fixed period of time based on CPPI (Constant proportion portfolio insurance)

ULIPs help create wealth over a longer period of time. During the initial years of the policy, the cost structure is high and hence there are more units deducted. However, overall charges reduce substantially over time thus allowing more amount to be allocated in the chosen funds. This way the investment grows over a period of time leading to a growth in fund value.

Insurance companies have products to offer value to their policyholders with multiple options as mentioned below:

- **Self Managed option** where the policyholder can decide to choose the fund based on his risk taking capacity
- **Lifecycle option** where the portfolio allocation automatically changes the exposure to debt and equity depending upon their life stage and risk profile

- **Systematic Transfer option** that helps safeguarding policyholders' investments from equity market volatility through rupee cost averaging where the premium is initially allocated to the liquid fund and gradually moved to an equity fund in equal monthly installments.

At Birla Sun Life Insurance we offer all these options to our policyholders to choose from and are committed to maximizing policyholders' long-term wealth by consistently generating superior risk-adjusted returns by following a disciplined long-term investment approach.

Maturity Profile

About the Fund

Objective: To provide blend of fixed return by investing in debt & money market instruments and capital appreciation by predominantly investing in equities of fundamentally strong and large blue chip companies.

Strategy: To build and actively manage a well-diversified equity portfolio of value & growth driven stocks by following a research-focused investment approach. While appreciating the high risk associated with equities, the fund would attempt to maximize the risk-return pay-off for the long-term advantage of the policyholders. The non-equity portion of the fund will be invested in high rated debt and money market instruments and fixed deposits.
